Skills Summary

Programming Languages: C++, Java, Python, PHP (Laravel)

Web Development: HTML, CSS, JavaScript

Databases: RDBMS

Tools & Platforms: Oracle APEX, Canva, WordPress, Wix, Shopify, Figma, Supabase

Operating Systems: Kali Linux, Ubuntu

Soft Skills: Problem-Solving, Critical Thinking, Team Collaboration, Continuous Learning

Projects

Mealit: Built a Laravel & Node.js full-stack web application utilizing AI (OpenAI/GPT-4) to generate personalized recipes from available ingredients, featuring AI meal planning, smart grocery lists, voice search, and an intelligent cooking chatbot.

Live Project: <https://mealit.rf.gd/>

Student Result Management System: Developed a GUI-based Java application using Swing, implementing OOP concepts and file handling to manage student records and results.

Election Management System: Built a C++ console-based system utilizing data structures (arrays, queue, stack) to simulate voter registration, election processes, and result generation.

Silk & Shape: Created and managed an online home décor store “Silk & Shape” on Wix and WordPress.

Quiz Game Application: Developed an interactive web application using HTML, CSS, and JavaScript, featuring dynamic questions, scoring system, and real-time feedback.

Expense Tracker: Built a web-based application using JavaScript to manage daily expenses with dynamic updates and local storage integration.

Password Generator: Implemented a secure password generator using JavaScript with customizable options for length and character types.

Todo App: Created a task management web app using JavaScript, allowing users to add, delete, and track tasks efficiently.

Bookmark Saver: Developed a web application using JavaScript to save and manage bookmarks using local storage.

Drag-and-Drop Interface: Implemented interactive drag-and-drop functionality using JavaScript to enhance user experience and UI interaction.

Contact Form: Designed a responsive contact form using HTML, CSS, and JavaScript with basic input validation.
